ELENE V

HOVSEPYAN

PROFILE

Data Science student and software developer with hands-on experience building data-driven systems, relational databases, web interfaces, and GIS applications. Experience in environmental research through data analysis, data management, and geospatial visualization projects. Skilled in developing tools for organizing, processing, and visualizing complex datasets, with interests in data pipelines, GIS applications, and research-focused digital solutions.

EXPERIENCE

Research Assistant: AUA Acopian Center for the Environment

Jul 2025 - Feb 2026

- Architected an interactive GIS platform covering 3+ environmental research domains, transforming complex environmental datasets into publicly accessible digital tools and expanding research accessibility.
- Structured and curated 500+ environmental survey records, improving data consistency and enabling efficient analysis across multiple research projects.
- Produced 4+ research publications and reports, supporting data preparation, analysis, and publication workflows in collaboration with senior researchers.

Software Engineer: LinkyJuice Part-time (~30 hrs/week, concurrent with university studies)

Oct 2025 - Present

- Developed and maintained web-based SEO automation tools, increasing structured data processing throughput by 3× and reducing manual operational workload.
- Optimized backend data workflows, reducing manual processing effort by approximately 40% and improving operational efficiency across internal systems.
- Partnered with 3+ cross-functional teams to deliver new features, resolve technical issues in a scalable, production-grade platform.
- Built automated data-processing workflows for large structured datasets, improving system reliability and reducing manual intervention by approximately 40%.

Event coordinator: YMCA Armenia

Sep 2024 - Present

- Planned 10+ community projects, ensuring successful execution of events involving volunteers, participants, and external stakeholders.
- Cultivated leadership and organisational skills while managing diverse stakeholder groups and driving effective cross-team communication.
- Led and coordinated a team of 5+ volunteers across multiple projects, improving task distribution, communication, and event execution efficiency.

EDUCATION

American University Of Armenia, Yerevan

2023-2027

Bachelor of Science

Data Science

Data Structures, Database Systems, Probability & Statistics, Artificial Intelligence, Data Visualization

Armenian Bioinformatics Institute

2025

- Introduction to Programming: Python for Genomics
- Introduction to Molecular Biology

SKILLS

Programming & Data: Python (pandas, data processing), SQL, R

Web & Systems: Web development, API integration, Git/GitHub

Databases: Relational database design (ERD modeling, queries, triggers)

GIS & Analysis: ArcGIS, geospatial data visualization

Tools: Power BI, VS Code, PyCharm

Soft Skills: Strategic Planning, Stakeholder Communication

PROJECTS

Database Design & Data Warehouse Project (SQL, SQL Server)

Designed a relational database and dimensional data warehouse using SQL Server, including normalized schemas, fact tables, dimension tables. Implemented complex SQL queries, stored procedures, constraints, and data integration processes to support business reporting and analytics.

Machine Learning & Data Analysis Project (Python, R)

Created predictive machine learning models and performed statistical analysis using Python and R, applying data preprocessing, feature engineering, hypothesis testing, and model evaluation techniques. Created analytical reports to support data-driven generation.
